EXPERIENCE

Software Engineer

Jan 2025 – Present

Raytheon Missiles & Defense

Boston, MA

- Modernized legacy C++ user interfaces with modern design patterns, reducing operator training time by 25% and improving system usability
- Refactored embedded LynxOS software into event-driven C++ architecture, reducing CPU usage by 30% for mission-critical systems
- Resolved 5+ defects per sprint, improving system stability and reliability across production environments
- Rewrote internal build and automation tools, increasing team productivity by 20% through streamlined workflows and reduced manual processes

Undergraduate Researcher

Sept 2022 – Jan 2023

University of Massachusetts Boston

Boston, MA

- Conducted extensive research on visual recognition techniques aimed at identifying defects and enabling informed decision-making processes
- Employed Python programming language and machine learning algorithms to analyze patterns within visual data and accurately predict outcomes
- Acquired proficiency in machine learning techniques for visual representation identification

PROJECTS

SmartIoT — Real-Time IoT Monitoring Platform

React, Node.js, Express, ML, Firebase, REST APIs

smartiotjs.netlify.app

Nov 2025 – Dec 2025

- Architected full-stack IoT platform with React frontend (Netlify) and Node.js/Express RESTful API (Render), processing 200+ real-time sensor readings with interactive charts and alert system
- Implemented ML-powered temperature forecasting using exponential smoothing with rolling window analysis, predicting 5-15 minutes ahead
- Deployed production application resolving CORS configuration, Netlify build conflicts, and environment variables, including CSV export

Matched — Job Matching Platform

Python, Django, React, JavaScript, SQL

Sept 2022 – Dec 2022

- Built full-stack web application connecting job seekers with employers, implementing user authentication, job posting, and search functionality with Django REST APIs
- Designed responsive frontend with React and JavaScript, creating seamless user experience for both candidates and recruiters with real-time filtering and matching
- Collaborated using Git version control in team environment, following agile development practices to deliver production-ready features

Weather Forecast Application

React, JavaScript, REST APIs, OpenWeather API

Dec 2023 – Jan 2024

- Developed responsive React application for real-time weather data visualization with dynamic updates and location-based forecasting
- Optimized API calls with efficient state management and caching strategies, reducing load times by 60% and improving user experience
- Implemented error handling and loading states for robust application behavior across varying network conditions

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, SQL, HTML/CSS, R

Frameworks & Libraries: React, Django, Node.js, Express.js, Pandas, NumPy, Matplotlib, Bootstrap, JDBC

Tools & Technologies: Git, AWS, Azure, REST APIs, VS Code, IntelliJ, PyCharm, Eclipse

Concepts: Object-Oriented Programming, Data Structures & Algorithms, Machine Learning, Distributed Systems

EDUCATION

Bachelor of Science in Computer Science

May 2023

University of Massachusetts Boston, Boston, MA

GPA: 3.5/4.0
